

David Lyons

David Lyons is the Data Architect for the National Center for Computational Toxicology (NCCT). He has over 22 years of information technology experience and was previously the Scientific Data Manager for the Office of Research and Development (ORD). David's interests are in data modelling, integration and architecture, semantic technologies, and standardization.

David started his career in the US Army a Ranger and then later became a helicopter pilot. In these roles he deployed to several countries in Central and South America, Africa, Middle East, and throughout Europe. His Army career spanned 24 years and 6 combat tours. He is proud to continue his government service with the US EPA in a position that affords the luxury of sleeping at home most nights.

David graduated from University of Phoenix in 2006 with a B.S. in Information Technology. In 2008, he earned a Master of Business Administration (MBA) from Northcentral University.
